

"NATIONAL" METAL MOLDING TOOLS

No. 418

Lever Type Hand Punch

No. 1

To punch the keyhole slot at the extreme end of the molding base, as is required for fittings, set the side stop in position shown in cut No. 1.

To punch additional holes throughout the length of the molding base for purposes of additional support, set the side stop in position shown in cut No. 2.

No. 2

The "National" lever type punch is designed for accurate punching of the keyhole slot. This punch is shipped assembled on an oak base complete with handle. Its use involves no objectionable noise or jar and since all moving parts and the die are of hardened steel, long life is insured through reasonably careful use and keeping it well oiled.

No. 422

Lever Type Hand Shear

The "National" lever type hand shear was designed for cutting the base and capping of "National" metal molding.

It is arranged to shear the base and capping separately, not assembled, the die block being provided with separate grooves for each as shown in illustration. The shear is shipped assembled on an oak base complete with handle. The knives and die are of hardened steel, insuring long life.
